

I understand discussion is in place that could raise postal rates anywhere from 12% to 20%.

I am writing on behalf of businesses. My company has been trying to expand our business in other countries. With postal rates going up considerably, it seriously affects our ability to provide services and products to people in other countries. We are considering using email more as a way to avoid the high costs of postage. We are asking that you keep postal rates as low as possible. Also, we are asking that you would simplify the rates as much as possible. Right now, postal rates are very complicated. Thank you for your help.
